

# WARREN SAFER-EQUITY FUND

## INVESTMENT APPROACH

The key advantage to the Warren Safer-Equity Fund is the unique volatility hedge employed. Utilizing the Warren Macro VIX Indicator, the volatility investment protects assets just-in time as opposed to typical ETF vol strategies that employ short, mid- term or mixed futures holdings. Warren Safer-Equity utilizes options on VIX futures in an attempt to hedge away black swan or fat tail risk.

On the long side, the Warren Safer-Equity Fund invests in companies that produce attractive cash dividends compared to their peer group. Stock selection includes both fundamental bottoms-up analysis as well as technical analysis. Warren Safer-Equity avoids companies that may not have the financial strength to continue to pay significant dividends in the future. Stocks are selected from the global pool of possibilities and from many sectors of the economic landscape.

## COMPOSITE PERFORMANCE

2022 YTD ROI	-7.68	2018 ROI	-6.81
2021 ROI	22.02	2017 ROI	21.60

WSEF: Monthly returns based on changes in the NAV as reported by administrator Alter Domus and confirmed by annual audit via Eisner Amper. Returns calculation: Compound daily changes roll up to monthly change. Annual calc: For a full year:  $(\text{EndNAV}/\text{BeginNAV})^{1/(\#\text{days}/365)} - 1$ . For part year (not annualized): Compound daily change. Multi-year calculation:  $(\text{EndNAV}/\text{BeginNAV})^{1/(\#\text{days}/365)} - 1$ . Dividends reinvested. After fees. See full disclosures on website. Globally diversified portfolio (GDP) calculated the same way, consists of a basket of low cost ETFs all adjusted to include dividends 20%SPY, 25%AGG, 10%GSG, 25%VEA, 10%BIK(2008-2012), 10%EMG(2013-current), 5%IWM, and 5%EMB after costs.. The Globally diversified portfolio is not a benchmark and not comparable in composition or risk, however, we observe similar approaches being used in the industry.
